

INDUCTION OF THE MEDICAL SCIENCE INSTITUTE BY STEM CANADA

January 13, 2025

Congratulations to the executives, staff, teachers, sponsors and everyone who helped make the Medical Science Institute a reality.

Among the many things that make our province great is the talent and expertise found within our science and technology sectors. Ontario is a leader in the health care and life sciences sectors because we have some of the brightest and best people right here in our province.

Your institute can play an important role in enriching young minds and nurturing our future doctors and medical professionals with immersive programs and university-level courses as they prepare to take their place in the health care sector of the future.

As you know, our government is committed to an improved curriculum that emphasizes STEM education, as well as life and job skills. This new science and technology curriculum will help give young people the skills to think critically, dream boldly, and become the next generation of scientists, innovators and entrepreneurs.

Best wishes for your continued success.

Doug Ford
